

5. Ford **ESCL** emulator, for FORD global B1 (B2E) platform - Fiesta, B-Max etc.

Everything is in the description.

With a 4-pin plug will not work. For this is only for 8-pin, which are on small cars ...

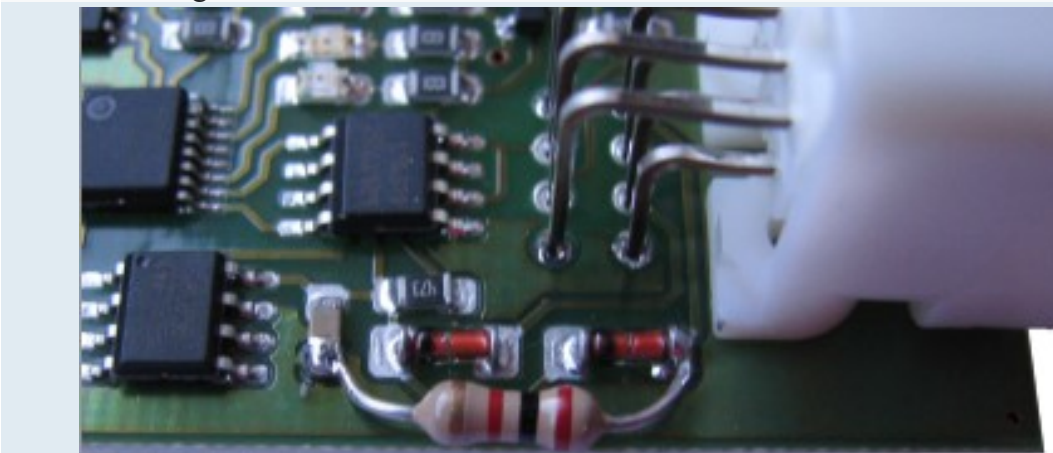

is supplied WITHOUT a plug, in order to save the client's money.

However, it is also possible to obtain it with a sealed plug in a ready-to-use form.

Naturally, for an appropriate material reward,

ATTENTION: on some systems it is required to install an additional load (resistor) on the motor plus control wire. 1.2 lump for weight, and more is possible. In fact, the wire needs to be free from air. It can be done something like this -

In addition - must clear errors in keyless module and body control unit.
